

Base Investments Sicav - Bonds Value EUR

Monthly Factsheet - July 2025

Marketing Document for retail investors in: LU, CH, IT

Fund Data

Strategy	Flexible Bond
Fund size	€257mln
Portfolio Manager	Giuliano Flematti
Domicile, Legal structure	Luxembourg UCITS
Delegated Investment Manager	Banca del Sempione SA
Custodian Bank	Edmond De Rothschild (Europe)
Administrator/ Management Company	Edmond De Rothschild Asset Management (Lux)
Auditor	Pricewaterhouse Coopers Sarl
Management Fee	1.00%
Performance Fee	15% of the performance of the NAV against the HWM

Class	Type	ISIN
EUR	Retail	LU0133519883

Objective

Bonds Value is a global and dynamic bond fund, that mainly invest in fixed-income securities. The sub-fund is decorrelated to interest rate markets. The Sub-Fund is actively managed without reference to any benchmark meaning that the Investment Manager has full discretion over the composition of the Sub-Fund and the deviation of portfolio holdings from the Index may be significant.

Strategy

Discretionary and unconstrained. The Sub-Fund has the flexibility to invest in a wide range of bonds, with no constraints of duration, sectorial allocation or geographical area. Up to 20% of the portfolio may be invested in High Yield.

Global Value Approach	Flexible Duration	Relative Value	Forex
Bonds securities selection with potential for appreciation	The possibility to be <i>long or short</i> duration allows value creation in every market condition	Spread between markets and along the curves	In presence of <i>trend or strong manager conviction</i>

Performance Summary

The sub-fund is actively managed without reference to any benchmark (index). The benchmark in this graph is shown here for comparative purposes only and is not used for the calculation of the performance fee.

Class	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	YTD

Monthly summary

July concluded with markets setting a new balance, supported by improving global geopolitical conditions. Several trade agreements were finalized during the month, particularly between the United States and Japan, Europe, and China. The introduced tariffs, ranging between 15% and 20%, were welcomed by the markets, helping to dissipate the uncertainty followed after Trump's Liberation Day.

On the macroeconomic front, the "no landing" scenario was further confirmed: employment was stable, second-quarter GDP grew, and inflation got closer to Federal Reserve's targets. In this context, both the Fed and the ECB kept rates unchanged, awaiting to evaluate the impact of new tariffs.

The bond market saw a negative reaction, pressuring longer maturities, driven by the Trump administration's approval of the One Big Beautiful Bill Act. Despite the increased revenue stream from tariffs, high public spending fueled fears of fiscal disorder. The lower implied rate cuts and economic resilience also contributed to further pressures on government bonds.

On the contrary, the credit market remained calm, with spreads returning to tight levels after the trade war tensions. The same was true for equities, which recorded a month of stable growth, accompanied by low volatility and strong concentration in leading sectors, such as US technology and the "Magnificent 7." Positive quarterly results and the weakening dollar supported tech investor sentiment, which was partially immune to the impact of tariffs compared to more cyclical sectors. Performances in Europe and Switzerland were weaker, penalized by downward revisions to earnings and the weakness of the euro, with the S&P 500 outperforming European indices.

Finally, on the commodities front, relative stability was observed: gold remained unchanged, oil rose, and copper fluctuated sharply following the abandonment of tariffs by the United States.

Positioning and market view

The subfund had a slightly negative July, recording a -0.40 (EUR class), bringing the year-to-date result to +14.10 compared to the Bloomberg Global Aggregate of +1.49.

A month of consolidation at highest levels for the subfund, despite a couple of investment components (short dollar and long duration) detracting. Returns from steepening positions on the US and German curves were positive. We keep a constructive approach in terms of expectations of lower yields, especially in the US, where some form of financial repression aimed at better managing the enormous debt is, in our view, limiting the upside potential for yields. We very much like this asymmetry, which would instead lead to a sharp and rapid reduction in rates in the event of a slowdown/recession.

On the credit risk front, we continue to reduce our exposure, also through the use of long index CDSs on the high-yield side. We keep our short position on the dollar, which has seen a month of natural recovery in a trend we believe is optimally positioned toward a decrease in the value of the US currency. We keep, albeit reduced, exposure to the steepening of the US and German curves and their relative value within the euro area (OATs and BTPs vs. Bunds).

Risk Indicator

The summary risk indicator assumes you keep the Product until maturity end of the recommended holding period (5 years). The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this Product compared to other products. It shows how likely it is that the Product will lose money because of movements in the markets or because we are not able to pay you.

This Product is rated in the category above mentioned, in line with the type of securities and geographic regions detailed under the heading "Objectives and investment policy". The capital is not guaranteed. The following risks may be materially relevant but may not always be adequately captured by the synthetic risk indicator and may cause additional loss:

Credit Risk: the Product may invest in debt securities which are exposed to the risk that the borrower will be unable to meet its repayment obligations.

Counterparty Risk: the Product may suffer losses if a counterparty to a financial instrument defaults and fails to meet its payment obligations to the Product.

Emerging and Frontiers Markets Risk: increased political or social instability, economies based on only a few industries, unstable currencies, runaway inflation, highly volatile securities markets, unpredictable shifts in policies relating to foreign investments, lack of protection for investors may affect the investments of the Product.

Interest Rate Risk: interest rate risk is the possibility that the value of the assets of the Product will decline as the result of an unexpected change in interest rates, especially but not limited, for investments in bonds.

Liquidity Risk: which may occur: when investments are made in financial instruments that could have a lower level of liquidity in some circumstances for example in the case of a market crash or default of issuers and/or due to massive redemptions of shareholders resulting in a potential decrease of the value of certain of the Product's investments.

Operational Risk: this is the risk that failures, problems and/or inadequacies of systems, processes and/or people (in particular by the investment manager) may cause losses to the Product.

Risk linked to the use of derivative instruments: a careful use of derivatives can be beneficial to the Product but implies additional risks different from traditional assets such as the risk of divergent valuation depending on the application of different pricing methodologies. The use of derivatives can result in greater fluctuations of the Product assets and may cause the Product to lose as much as or more than the amount invested. Due to the use of derivatives, the Product may have an increased exposure to particular investment known as leverage. A fall in value of such investments can result in a proportionately greater loss to the Product.

Currency Risk: the Product invests in assets priced in foreign currencies which may be adversely affected by changes in exchange rates in relation to the reference currency of the Product and of the share classes denominated in a currency other than the reference currency.

Volatility-Leverage: In order to efficiently implement the Sub-Fund's strategy and to achieve the risk target that is consistent with the Sub-Fund's risk profile, the Sub-Fund will rely intensively on financial derivative instruments and underlyings that may generate a high level of leverage and the Sub-Fund may experience higher volatility than a fixed income fund that does not use leverage.

The list of possible risks is not exhaustive; full risk information is available in the Sale Prospectus, chapter 5 "Special consideration on risks".

Glossary

Share class sub-fund of a fund differentiated in terms of client type, fee structure, currency, minimum investment or other characteristics. The characteristics of each share class are described in the offering prospectus. **Management fee** is a fee that covers all costs charged to a fund in relation to portfolio management services and, if applicable, distribution services. **Incentive fee (performance)** is a fee withheld by the management company based exclusively on the results achieved by the fund and is calculated if the fund performs better than a reference index, the benchmark, or if it records a gain in absolute terms. **Duration** indicates the number of years an investor should keep a position in the bond until the present value of the bond's cash flows to equal the amount paid for that bond. Longer is the duration, more the price of a bond will be influenced by changes in interest rates. Duration can also be used to compare the risk of debt securities with maturities and yields. **High Water Mark (HWM)** is the highest value achieved by a fund and it is used as a threshold to measure a manager's performance. In the case of this fund, according to the HWM principle, no performance fee will be charged if the NAV, before considering the fee, is lower than the latest reference NAV. Any losses accumulated in the past can be written off after a period of five years. The performance fee is assessed at the end of each calendar year, following a calculation method described in the prospectus. **Index** is a portfolio that holds a broad range of securities according to predefined rules. Some indices are used to represent the performance of particular markets and therefore serve as a point of reference for measuring the performance of other portfolios. An index used as a reference for performance comparison is called a "benchmark index". **ISIN** (International Securities Identification Number) unique code that identifies a specific financial security. It is assigned by the respective national coding agency of a country. **Bonds** are debt (for the entity that issues them) and credit securities (for the entity that purchases them) that represent a portion of debt taken out by a company or public body for financing. They guarantee the buyer the reimbursement of the capital (at the end of the pre-established period) plus interest (the remuneration that is due to those who purchase bonds in exchange for the sum invested). **High Yield Bonds** are a type of corporate bond that offers a higher interest rate due to its greater risk of default. Credit rating evaluates the ability of a bond issuer to repay all its debt obligations (interest and principal) on time. High ratings, such as AAA or Aaa, indicate low risk (i.e. a low probability of default), while ratings such as BBB- or Baa3 indicate greater risk. **Yield to maturity (YTM)** indicates the fund's return if all the bonds in the portfolio were to be held until the maturity date. The ratio is expressed as a percentage annual return. **Volatility**, the fluctuation of a fund's performance over a given period, provides an analysis of the amount of risk and uncertainty in a security or portfolio. Typically, higher is the volatility, riskier is the securities or portfolio.
