

Base Investments Sicav - Bonds Value EUR

Monthly Factsheet - January 2026

Marketing Document for retail investors in: LU, CH, IT

Fund Data

Strategy	Flexible Bond
Fund size	€298mln
Portfolio Manager	Giuliano Flematti
Domicile, Legal structure	Luxembourg UCITS
Delegated Investment Manager	Banca del Sempione SA
Custodian Bank/ Administrator	CACEIS Bank, Luxembourg Branch
Management Company	Edmond De Rothschild Asset Management (Lux)
Auditor	Pricewaterhouse Coopers Sarl
Management Fee	1.00%
Performance Fee	15% of the performance of the NAV against the HWM

Class	Type	ISIN
EUR	Retail	LU0133519883

Objective

Bonds Value is a global and dynamic bond fund, that mainly invest in fixed-income securities. The sub-fund is decorrelated to interest rate markets. The Sub-Fund is actively managed without reference to any benchmark meaning that the Investment Manager has full discretion over the composition of the Sub-Fund and the deviation of portfolio holdings from the Index may be significant.

Strategy

Discretionary and unconstrained. The Sub-Fund has the flexibility to invest in a wide range of bonds, with no constraints of duration, sectorial allocation or geographical area. Up to 20% of the portfolio may be invested in High Yield.

Global Value Approach	Flexible Duration	Relative Value	Forex
Bonds securities selection with potential for appreciation	The possibility to be <i>long or short duration</i> allows value creation in every market condition	Spread between markets and along the curves	In presence of <i>trend or strong manager conviction</i>

Performance Summary

The sub-fund is actively managed without reference to any benchmark (index). The benchmark in this graph is shown here for comparative purposes only and is not used for the calculation of the performance fee.

Monthly summary

January was marked by increased volatility on equity markets, in a context of macroeconomic uncertainty and growing attention to central banks' next moves. In the United States, the Federal Reserve left rates unchanged, reiterating its intention to wait for further signs of slowing inflation before proceeding with any cuts during 2026. However, markets began to price in the possibility of an initial rate cut as early as this spring, supported by weaker-than-expected labor market data and a cooling price environment.

In Europe, the ECB maintained a similar tone, stressing that the disinflationary process is underway but still incomplete. European government bond yields remained fairly stable despite expectations of a closer monetary easing than assumed in December.

The Swiss National Bank also reiterated its cautious strategy, while signaling the possibility of intervening on the exchange rate in the event of further upward pressure on the Swiss franc.

Stocks markets were generally positive during the month: the S&P 500 closed the month up 1.4%, while the Nasdaq 100 gained around 1.2%. In Europe performances were more mixed with the Euro Stoxx 600 up 3.2%, while the Swiss SMI fell slightly to -0.60%.

Commodities showed mixed trends as well: Brent oil rose toward \$70 a barrel, driven by rising tensions in the Middle East, while gold closed the month up 13.3% despite a sharp decline in the final days of the month, supported by renewed demand for hedging against geopolitical risk and renewed demand from central banks. On the cryptocurrency front, Bitcoin closed the month down around \$78,000, continuing its generally negative trend.

Positioning and market view

Positive start to the year for the sub-fund, recording a +2.09% gain in January (EUR class) compared to the Bloomberg Global Aggregate, which stood at +0.15%.

We continue to keep a constructive approach to portfolio duration despite market price action signaling some investor uncertainty, despite the very low volatility environment. The 3% yield on the German Bund and the 4.30% yield on the 10-year US bond seem like excellent entry points.

We keep significant exposure to long-dated (20–30 year) US inflation-linked Treasuries, which currently offer very attractive real yields. However, the significant uncertainties we face lead us to imagine a potentially higher risk premium on the long end of the US yield curve. This is why we kept a 10–30 year steepening position, which has been in place for a long time now.

On the credit front, we keep a cautious approach consistent with the very tight spreads we face. Less financial subs and less corporate hybrids, combined with long positions on credit default swap (CDS) indices in the high-yield segment, mean that the part of corporate bonds in the portfolio is now lower than that of government bonds.

On the currency front, we remain short the US dollar.

Risk Indicator

The summary risk indicator assumes you keep the Product until maturity end of the recommended holding period (5 years). The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this Product compared to other products. It shows how likely it is that the Product will lose money because of movements in the markets or because we are not able to pay you.

This Product is rated in the category above mentioned, in line with the type of securities and geographic regions detailed under the heading "Objectives and investment policy". The capital is not guaranteed. The following risks may be materially relevant but may not always be adequately captured by the synthetic risk indicator and may cause additional loss:

Credit Risk: the Product may invest in debt securities which are exposed to the risk that the borrower will be unable to meet its repayment obligations.

Counterparty Risk: the Product may suffer losses if a counterparty to a financial instrument defaults and fails to meet its payment obligations to the Product.

Emerging and Frontiers Markets Risk: increased political or social instability, economies based on only a few industries, unstable currencies, runaway inflation, highly volatile securities markets, unpredictable shifts in policies relating to foreign investments, lack of protection for investors may affect the investments of the Product.

Interest Rate Risk: interest rate risk is the possibility that the value of the assets of the Product will decline as the result of an unexpected change in interest rates, especially but not limited, for investments in bonds.

Liquidity Risk: which may occur: when investments are made in financial instruments that could have a lower level of liquidity in some circumstances for example in the case of a market crash or default of issuers and/or due to massive redemptions of shareholders resulting in a potential decrease of the value of certain of the Product's investments.

Operational Risk: this is the risk that failures, problems and/or inadequacies of systems, processes and/or people (in particular by the investment manager) may cause losses to the Product.

Risk linked to the use of derivative instruments: a careful use of derivatives can be beneficial to the Product but implies additional risks different from traditional assets such as the risk of divergent valuation depending on the application of different pricing methodologies. The use of derivatives can result in greater fluctuations of the Product assets and may cause the Product to lose as much as or more than the amount invested. Due to the use of derivatives, the Product may have an increased exposure to particular investment known as leverage. A fall in value of such investments can result in a proportionately greater loss to the Product.

Currency Risk: the Product invests in assets priced in foreign currencies which may be adversely affected by changes in exchange rates in relation to the reference currency of the Product and of the share classes denominated in a currency other than the reference currency.

Volatility-Leverage In order to efficiently implement the Sub-Fund's strategy and to achieve the risk target that is consistent with the Sub-Fund's risk profile, the Sub-Fund will rely intensively on financial derivative instruments and underlyings that may generate a high level of leverage and the Sub-Fund may experience higher volatility than a fixed income fund that does not use leverage.

The list of possible risks is not exhaustive; full risk information is available in the Sale Prospectus, chapter 5 "Special consideration on risks".

Glossary

Share class sub-fund of a fund differentiated in terms of client type, fee structure, currency, minimum investment or other characteristics. The characteristics of each share class are described in the offering prospectus. **Management fee** is a fee that covers all costs charged to a fund in relation to portfolio management services and, if applicable, distribution services. **Incentive fee (performance)** is a fee withheld by the management company based exclusively on the results achieved by the fund and is calculated if the fund performs better than a reference index, the benchmark, or if it records a gain in absolute terms. **Duration** indicates the number of years an investor should keep a position in the bond until the present value of the bond's cash flows to equal the amount paid for that bond. Longer is the duration, more the price of a bond will be influenced by changes in interest rates. Duration can also be used to compare the risk of debt securities with maturities and yields. **High Water Mark (HWM)** is the highest value achieved by a fund and it is used as a threshold to measure a manager's performance. In the case of this fund, according to the HWM principle, no performance fee will be charged if the NAV, before considering the fee, is lower than the latest reference NAV. Any losses accumulated in the past can be written off after a period of five years. The performance fee is assessed at the end of each calendar year, following a calculation method described in the prospectus. **Index** is a portfolio that holds a broad range of securities according to predefined rules. Some indices are used to represent the performance of particular markets and therefore serve as a point of reference for measuring the performance of other portfolios. An index used as a reference for performance comparison is called a "benchmark index". **ISIN** (International Securities Identification Number) unique code that identifies a specific financial security. It is assigned by the respective national coding agency of a country. **Bonds** are debt (for the entity that issues them) and credit securities (for the entity that purchases them) that represent a portion of debt taken out by a company or public body for financing. They guarantee the buyer the reimbursement of the capital (at the end of the pre-established period) plus interest (the remuneration that is due to those who purchase bonds in exchange for the sum invested). **High Yield Bonds** are a type of corporate bond that offers a higher interest rate due to its greater risk of default. Credit rating evaluates the ability of a bond issuer to repay all its debt obligations (interest and principal) on time. High ratings, such as AAA or Aaa, indicate low risk (i.e. a low probability of default), while ratings such as BBB- or Baa3 indicate greater risk. **Yield to maturity (YTM)** indicates the fund's return if all the bonds in the portfolio were to be held until the maturity date. The ratio is expressed as a percentage annual return. **Volatility**, the fluctuation of a fund's performance over a given period, provides an analysis of the amount of risk and uncertainty in a security or portfolio. Typically, higher is the volatility, riskier is the securities or portfolio.
