## Monthly Factsheet - May 2025

Marketing Document for retail investors in: LU, CH, IT

### Fund Data

<b>Strategy</b>	Flexible Bond
<b>Fund size</b>	€244mln
<b>Portfolio Manager</b>	Giuliano Flematti
<b>Domicile, Legal structure</b>	Luxembourg UCITS
<b>Delegated Investment Manager</b>	Banca del Sempione SA
<b>Custodian Bank</b>	Edmond De Rothschild (Europe)
<b>Administrator/ Management Company</b>	Edmond De Rothschild Asset Management (Lux)
<b>Auditor</b>	Pricewaterhouse Coopers Sarl
<b>Management Fee</b>	1.00%
<b>Performance Fee</b>	15% of the performance of the NAV against the HWM

### Class Type ISIN

EUR	Retail	LU0133519883
-----	--------	--------------

### Objective

Bonds Value is a global and dynamic bond fund, that mainly invest in fixed-income securities. The sub-fund is decorrelated to interest rate markets. The Sub-Fund is actively managed without reference to any benchmark meaning that the Investment Manager has full discretion over the composition of the Sub-Fund and the deviation of portfolio holdings from the Index may be significant.

### Strategy

Discretionary and unconstrained. The Sub-Fund has the flexibility to invest in a wide range of bonds, with no constraints of duration, sectorial allocation or geographical area. Up to 20% of the portfolio may be invested in High Yield.

Global Value Approach	Flexible Duration	Relative Value	Forex
Bonds securities selection with potential for appreciation	The possibility to be <i>long or short</i> duration allows value creation in every market condition	Spread between markets and along the curves	In presence of <i>trend or strong manager conviction</i>

### Performance Summary

The sub-fund is actively managed without reference to any benchmark (index). The benchmark in this graph is shown here for comparative purposes only and is not used for the calculation of the performance fee.

### Monthly summary

The month of May saw a continuous improvement in the global geopolitical landscape with the closing of the first trade agreements of the Trump administration, in particular with the UK. Also noteworthy was the meeting between the US and Chinese delegations in Geneva, in which the two countries would have found a basic agreement to discuss new trade pacts, sanctioning the reduction of reciprocal duties from 145% for the Americans and 125% for the Chinese to 30% and 10% respectively and laying the foundations for further discussions. On this more relaxed rhetoric, the stock indices continued to rebound, also supported by good quarterly results. The only thing to note was an increase in volatility on the occasion of Trump's threats to impose 50% tariffs on Europe, threats that were immediately withdrawn by the US president. This latest U-turn gave rise to a new acronym TACO (Trump Always Chickens Out) coined by the FT to signal the rapid rethinking following the president's statements.

As for the bond market, government bond yields remained under pressure, especially those with longer maturities such as 30 years and with the US 30-year bond exceeding the 5% threshold. Weighing on the cost of American debt was the new "Big Beautiful Bill Act" just passed by Congress and which foresees a further increase in the deficit at a time when American assets (bonds and currency) are already suffering due to lack of demand. Furthermore, in the month, the downgrade by Moody's and a more wait-and-see FED than expected further weighed down sentiment and led the US Treasury yield to close the month at 4.40%. The European panorama was less turbulent with the bund closing at the levels of the beginning of the month.

On the equity side, however, the price action was more solid with the S&P recording its best May since 1990, supported by the easing of duties and a quarterly earnings season that was above expectations. Finally, the Nvidia report also confirmed that investments in AI and data centers continue, bringing further positivity.

In the end, on the currency side, the weakness of the greenback against the main global currencies continues with the EUR/USD reaching 1,135, gold and WTI relatively little moved with the yellow metal stable at 3,300 USD per ounce and oil closing at 60.80 USD.

### Positioning and market view

Flattish month of May for the sub-fund which closes with a -0.28% which brings the result from the beginning of the year to + 10.19% (EUR Class) compared to the Bloomberg Global Aggregate eur index at + 1.20%

A much less volatile month than the previous one in which we were unable to seize particular opportunities on the markets. We are therefore keeping an approach that tends to favor the American curve in the belief that the markets' concerns are understandable but already largely priced in by yields. 5% on the long end and 4.5% on the ten-year represent excellent entry points in our opinion. We favor in particular the American thirty-year inflation-linked with real yields at 2.60%, extremely cheap in our opinion.

On the credit side, we keep a rather conservative approach and tend not to increase credit risk, preferring greater exposure to the government bond market. The overall duration of the sub-fund stands at 12 years. We have only partially reduced the steepening position (both in America and Germany), which nevertheless continues to give excellent results. We are firmly convinced that the US Dollar will continue to depreciate and we have further increased the short position.

## Monthly Factsheet - May 2025

### Risk Indicator

The summary risk indicator assumes you keep the Product until maturity end of the recommended holding period (5 years). The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this Product compared to other products. It shows how likely it is that the Product will lose money because of movements in the markets or because we are not able to pay you.

This Product is rated in the category above mentioned, in line with the type of securities and geographic regions detailed under the heading "Objectives and investment policy". The capital is not guaranteed. The following risks may be materially relevant but may not always be adequately captured by the synthetic risk indicator and may cause additional loss:

**Credit Risk:** the Product may invest in debt securities which are exposed to the risk that the borrower will be unable to meet its repayment obligations.

**Counterparty Risk:** the Product may suffer losses if a counterparty to a financial instrument defaults and fails to meet its payment obligations to the Product.

**Emerging and Frontiers Markets Risk:** increased political or social instability, economies based on only a few industries, unstable currencies, runaway inflation, highly volatile securities markets, unpredictable shifts in policies relating to foreign investments, lack of protection for investors may affect the investments of the Product.

**Interest Rate Risk:** interest rate risk is the possibility that the value of the assets of the Product will decline as the result of an unexpected change in interest rates, especially but not limited, for investments in bonds.

**Liquidity Risk:** which may occur: when investments are made in financial instruments that could have a lower level of liquidity in some circumstances for example in the case of a market crash or default of issuers and/or due to massive redemptions of shareholders resulting in a potential decrease of the value of certain of the Product's investments.

**Operational Risk:** this is the risk that failures, problems and/or inadequacies of systems, processes and/or people (in particular by the investment manager) may cause losses to the Product.

**Risk linked to the use of derivative instruments:** a careful use of derivatives can be beneficial to the Product but implies additional risks different from traditional assets such as the risk of divergent valuation depending on the application of different pricing methodologies. The use of derivatives can result in greater fluctuations of the Product assets and may cause the Product to lose as much as or more than the amount invested. Due to the use of derivatives, the Product may have an increased exposure to particular investment known as leverage. A fall in value of such investments can result in a proportionately greater loss to the Product.

**Currency Risk:** the Product invests in assets priced in foreign currencies which may be adversely affected by changes in exchange rates in relation to the reference currency of the Product and of the share classes denominated in a currency other than the reference currency.

**Volatility-Leverage** In order to efficiently implement the Sub-Fund's strategy and to achieve the risk target that is consistent with the Sub-Fund's risk profile, the Sub-Fund will rely intensively on financial derivative instruments and underlyings that may generate a high level of leverage and the Sub-Fund may experience higher volatility than a fixed income fund that does not use leverage.

**The list of possible risks is not exhaustive; full risk information is available in the Sale Prospectus, chapter 5 "Special consideration on risks".**

### Glossary

**Share class** sub-fund of a fund differentiated in terms of client type, fee structure, currency, minimum investment or other characteristics. The characteristics of each share class are described in the offering prospectus. **Management fee** is a fee that covers all costs charged to a fund in relation to portfolio management services and, if applicable, distribution services. **Incentive fee (performance)** is a fee withheld by the management company based exclusively on the results achieved by the fund and is calculated if the fund performs better than a reference index, the benchmark, or if it records a gain in absolute terms. **Duration** indicates the number of years an investor should keep a position in the bond until the present value of the bond's cash flows to equal the amount paid for that bond. Longer is the duration, more the price of a bond will be influenced by changes in interest rates. Duration can also be used to compare the risk of debt securities with maturities and yields. **High Water Mark (HWM)** is the highest value achieved by a fund and it is used as a threshold to measure a manager's performance. In the case of this fund, according to the HWM principle, no performance fee will be charged if the NAV, before considering the fee, is lower than the latest reference NAV. Any losses accumulated in the past can be written off after a period of five years. The performance fee is assessed at the end of each calendar year, following a calculation method described in the prospectus. **Index** is a portfolio that holds a broad range of securities according to predefined rules. Some indices are used to represent the performance of particular markets and therefore serve as a point of reference for measuring the performance of other portfolios. An index used as a reference for performance comparison is called a "benchmark index". **ISIN** (International Securities Identification Number) unique code that identifies a specific financial security. It is assigned by the respective national coding agency of a country. **Bonds** are debt (for the entity that issues them) and credit securities (for the entity that purchases them) that represent a portion of debt taken out by a company or public body for financing. They guarantee the buyer the reimbursement of the capital (at the end of the pre-established period) plus interest (the remuneration that is due to those who purchase bonds in exchange for the sum invested). **High Yield Bonds** are a type of corporate bond that offers a higher interest rate due to its greater risk of default. Credit rating evaluates the ability of a bond issuer to repay all its debt obligations (interest and principal) on time. High ratings, such as AAA or Aaa, indicate low risk (i.e. a low probability of default), while ratings such as BBB- or Baa3 indicate greater risk. **Yield to maturity (YTM)** indicates the fund's return if all the bonds in the portfolio were to be held until the maturity date. The ratio is expressed as a percentage annual return. **Volatility**, the fluctuation of a fund's performance over a given period, provides an analysis of the amount of risk and uncertainty in a security or portfolio. Typically, higher is the volatility, riskier is the securities or portfolio.

## Important Information

This document is a MARKETING COMMUNICATION relating to BASE INVESTMENTS SICAV (the "SICAV"), an investment company with variable capital established in Luxembourg, validly incorporated in accordance with the laws in force in Luxembourg and authorized by the Commission de Surveillance du Secteur Financier (CSSF), Luxembourg Financial Market Supervisory Authority. This document does not constitute in any way a solicitation of an offer to purchase shares in countries where such sale or solicitation is not authorized; furthermore, the shares of the SICAV may not be offered, sold or delivered in the USA or to US persons. The promoted investment concerns the acquisition of shares of the SICAV not in its underlying assets (such as shares of companies in which the SICAV invests). **Please consult the Sale Prospectus and the Key Information Document (KID) before making a final investment decision. These documents may be downloaded from our website [www.basesicav.lu/documents](http://www.basesicav.lu/documents), together with the Articles of Incorporation and the semi-annual and annual financial reports.** Furthermore, such documentation is available free of charge, both in English and in the local language of the market in which the SICAV is authorized for distribution, at the SICAV's registered office at 4, rue Robert Stumper, L-2557 Luxembourg, at local representatives, paying agents, and at the SICAV's distributors. **Please note that not all sub-funds and share classes may be available in your country. Additional information for investors in Switzerland:** The Representative and Paying Agent in Switzerland is: Banca del Sempione SA, Via P. Peri 5, CH-6901 Lugano, Switzerland. The place of execution is at the registered office of the SICAV Representative in Switzerland. The competent court is at the registered office of the SICAV Representative in Switzerland or at the registered office or domicile of the investor. **Additional information for investors in Italy:** In Italy the documentation listed above relating to the SICAV is available at distributors and on the website [www.basesicav.lu/documents](http://www.basesicav.lu/documents). The updated list of the distributors and the respective Paying Agents is made available to the public at the same distributors, at the respective Paying Agents (Banca Sella Holding S.p.A, Allfunds Bank S.A.U) and on the aforementioned website. A summary of investor rights is available here [www.basesicav.lu/documenti/altro](http://www.basesicav.lu/documenti/altro) in the local language of the jurisdictions where the individual share class is registered for marketing.

The Sicav or the Management Company may decide to terminate the arrangements made for the marketing of its collective investment undertaking in one Member State in accordance with Article 93a of Directive 2009/65/EC and Article 32a of Directive 2011/61/EU.

Past performances are not indicative of future results. Performance figures do not take into account any share issue or redemption fees or charges. Past results are shown in the share class reference currency. Yields are shown before tax charges. Investors are reminded that future returns are subject to taxation, which depends on their personal situation and may change in the future.
