

Monthly Factsheet - November 2025

Marketing Document for retail investors in: LU, CH, IT

Fund Data

Strategy	Flexible
Fund size	€282mln
Portfolio Manager	Giorgio Bertoli
Domicile, Legal Structure	Luxembourg, UCITS
Delegated Investment Manager	Banca del Sempione SA
Custodian Bank	Edmond De Rothschild (Europe)
Administrator/ Managment Company	Edmond De Rothschild Asset Management (Lux)
Auditor	Pricewaterhouse Coopers Sarl
Management Fee	1.50%
Performance Fee	15% of the performance of NAV against the HWM

Class	Туре	ISIN
EUR	Retail	LU0492099089

Objective

The aim of the Flexible Low Risk Exposure sub-fund is to generate positive real returns for the investor, whilst maintaining particular attention to the preservation of capital.

The active asset allocation process is implemented through a flexible approach on different asset class, mainly government and corporate bonds, equity and Forex. The maximum exposure to high risk securities such as equities and high yield bonds is limited singularly to 15% of total assets.

Global Strategy	High Flexibility	Relative Value	Asymmetries search
Seeking opportunities through a top-down ap- proach in the main geo- graphical regions.	Asset allocations independent from the benchmark. Low correlation with the main risk contributors (rates, equity markets).	Spread between currencies, fixed income curves, equity markets used to generate value on non-directional markets.	The corporate market illiquidity may occasionally generate investment opportunities.

Performance Summary

Source: Banca del Sempione SA

The sub-fund is actively managed without reference to any benchmark (index). The benchmark in this graph is shown here for comparative purposes only and is not used for the calculation of the performance fee.

Class EUR	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	YTD

Monthly summary

November saw the long-awaited agreement to end the US government shutdown, which partially countered the negative pressures resulting from the Fed's hawkish rhetoric during its latest monetary policy update. On the geopolitical front, US delegations continued diplomatic efforts to reach a truce between Russia and Ukraine, through direct dialogue between the respective parties. However, these efforts have yet to yield significant progress. In Europe, Rachel Reeves presented the new UK budget, which was partially welcomed by investors, through tax increases and public spending cuts. Long-term government yields suffered partial contagion from the expansionary fiscal policies proposed by the new Japanese prime minister, while the Bank of Japan is preparing to raise rates again in the coming sessions.

The market saw a more volatile session in equity and risk assets, with increased scrutiny on developments related to the massive capital invested in artificial intelligence developments, fueled by the potential new competition from Google's TPU chips and the new Gemini 3 model in the competitive landscape of OpenAI and Nvidia. The main European and US indices closed roughly flat, with emerging markets showing greater weakness.

Gold is rising again on growing fears of an AI bubble, while oil temporarily stabilized its downward trajectory, aided by OPEC+'s decision to implement new production bans due to US threats regarding Venezuela.

• Credit

Positioning and market view

Rates: Duration remained in the 6.5 area during the month, at high levels, albeit lower than in previous months. To reduce exposure to 30-year US bonds, which are present in the portfolio through inflation-linked bonds, we implemented a 10-30 steepening structure via futures, effectively shifting some of the duration risk to the 10-year node. On the UK curve, we sold a large part of inflation-linked bonds in favor of nominal bonds, due to breakevens that remain substantially higher than those in other countries. Tactically, we remain long on 5-year US bonds.

<u>Credit</u>: We confirm our prudent approach to credit risk, a choice that is not paying off for the moment but which we believe is appropriate from a risk management perspective.

Equity: zero structural exposure.

<u>Fx</u>: We took profits on a long EUR/USD hedge, re-establishing a more directional and strategic positioning. We are keeping our tactical position on the yen for the time being.

Monthly Factsheet - November 2025

Risk Indicator Risk Profile With lower risk 1 2 3 4 5 6 7 Potentially lower returns Potentially lower returns

The summary risk indicator assumes you keep the Product until maturity end of the recommended holding period (5 years). The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this Product compared to other products. It shows how likely it is that the Product will lose money because of movements in the markets or because we are not able to pay you. This Product is rated in the category above mentioned, in line with the type of securities and geographic regions detailed under the heading "Objectives and investment policy". The capital is not guaranteed.

The following risks may be materially relevant but may not always be adequately captured by the synthetic risk indicator and may cause additional loss:

Credit Risk: the Product may invest in debt securities which are exposed to the risk that the borrower will be unable to meet its repayment obligations.

Counterparty Risk: the Product may suffer losses if a counterparty to a financial instrument defaults and fails to meet its payment obligations to the Product.

Emerging and Frontiers Markets Risk: increased political or social instability, economies based on only a few industries, unstable currencies, runaway inflation, highly volatile securities markets, unpredictable shifts in policies relating to foreign investments, lack of protection for investors may affect the investments of the Product.

Market Risk: the Product may experience losses from fluctuations in securities prices in portfolio.

Liquidity Risk: when investments are made in financial instruments that could have a lower level of liquidity in some circumstances for example in the case of a market crash or default of issuers and/or due to massive redemptions of shareholders resulting in a potential decrease of the value of certain of the Product's investments.

Interest Rate Risk: interest rate risk is the possibility that the value of the assets of the Product will decline as the result of an unexpected change in interest rates, especially but not limited, for investments in bonds.

Currency Risk: the Product invests in assets priced in foreign currencies which may be adversely affected by changes in exchange rates in relation to the reference currency of the Product and of the share classes denominated in a currency other than the reference currency.

Operational Risk: this is the risk that failures, problems and/or inadequacies of systems, processes and/or people (in particular by the investment manager) may cause losses to the Product.

Risk linked to the use of derivative instruments: a careful use of derivatives can be beneficial to the Product but implies additional risks different from traditional assets such as the risk of divergent valuation depending on the application of different pricing methodologies. The use of derivatives can result in greater fluctuations of the Product assets and may cause the Product to lose as much as or more than the amount invested. Due to the use of derivatives, the Product may have an increased exposure to particular investment known as leverage. A fall in value of such investments can result in a proportionately greater loss to the Product.

Volatility-Leverage: In order to efficiently implement the Sub-Fund's strategy and to achieve the risk target that is consistent with the Sub-Fund's risk profile, the Sub-Fund will rely intensively on financial derivative instruments and underlyings that may generate a high level of leverage and the Sub-Fund may experience higher volatility than a fixed income fund that does not use leverage.

The list of possible risks is not exhaustive; full risk information is available in the Sale Prospectus, chapter 5 "Special consideration on risks".

Glossary

Share class sub-fund of a fund differentiated in terms of client type, fee structure, currency, minimum investment or other characteristics. The characteristics of each share class are described in the offering prospectus. Management fee is a fee that covers all costs charged to a fund in relation to portfolio management services and, if applicable, distribution services. Incentive fee (performance) is a fee withheld by the management company based exclusively on the results achieved by the fund and is calculated if the fund performs better than a reference index, the benchmark, or if it records a gain in absolute terms. Duration indicates the number of years an investor should keep a position in the bond until the present value of the bond's cash flows to equal the amount paid for that bond. Longer is the duration, more the price of a bond will be influenced by changes in interest rates. Duration can also be used to compare the risk of debt securities with maturities and yields. High Water Mark (HWM) is the highest value achieved by a fund and it is used as a threshold to measure a manager's performance. In the case of this fund, according to the HWM principle, no performance fee will be charged if the NAV, before considering the fee, is lower than the latest reference NAV. Any losses accumulated in the past can be written off after a period of five years. The performance fee is assessed at the end of each calendar year, following a calculation method described in the prospectus. Index is a portfolio that holds a broad range of securities according to predefined rules. Some indices are used to represent the performance of particular markets and therefore serve as a point of reference for measuring the performance of other portfolios. An index used as a reference for performance comparison is called a "benchmark index". ISIN (International Securities Identification Number) unique code that identifies a specific financial security. It is assigned by the respective national coding agency of a country. Bonds are debt (for the entity that issues them) and credit securities (for the entity that purchases them) that represent a portion of debt taken out by a company or public body for financing. They guarantee the buyer the reimbursement of the capital (at the end of the preestablished period) plus interest (the remuneration that is due to those who purchase bonds in exchange for the sum invested). High Yield Bonds are a type of corporate bond that offers a higher interest rate due to its greater risk of default. Credit rating evaluates the ability of a bond issuer to repay all its debt obligations (interest and principal) on time. High ratings, such as AAA or Aaa, indicate low risk (i.e. a low probability of default), while ratings such as BBB- or Baa3 indicate greater risk. Yield to maturity (YTM) indicates the fund's return if all the bonds in the portfolio were to be held until the maturity date. The ratio is expressed as a percentage annual return. Volatility, the fluctuation of a fund's performance over a given period, provides an analysis of the amount of risk and uncertainty in a security or portfolio. Tipically, higher is the volatility, riskier is the securities or portfolio.

Monthly Factsheet - November 2025

Important Information

This document is a MARKETING COMMUNICATION relating to BASE INVESTMENTS SICAV (the "SICAV"), an investment company with variable capital established in Luxembourg, validly incorporated in accordance with the laws in force in Luxembourg and authorized by the Commission de Surveillance du Secteur Financier (CSSF), Luxembourg Financial Market Supervisory Authority. This document does not constitute in any way a solicitation of an offer to purchase shares in countries where such sale or solicitation is not authorized; furthermore, the shares of the SICAV may not be offered, sold or delivered in the USA or to US persons. The promoted investment concerns the acquisition of shares of the SICAV not in its underlying assets (such as shares of companies in which the SICAV invests). Please consult the Sale Prospectus and the Key Information Document (KID) before making a final investment decision. These documents may be downloaded from our website www.basesicav.lu/documents, together with the Articles of Incorporation and semi-annual and annual financial reports. Furthermore, such documentation is available free of charge, both in English and in the local language of the market in which the SICAV is authorized for distribution, at the SICAV's registered office at 4, rue Robert Stumper, L-2557 Luxembourg, at local representatives, paying agents, and at the SICAV's distributors. Please note that not all subfunds and share classes may be available in your country. Additional information for investors in Switzerland: The Representative and Paying Agent in Switzerland is: Banca del Sempione SA, Via P. Peri 5, CH-6901 Lugano, Switzerland. The place of execution is at the registered office of the SICAV Representative in Switzerland. The competent court is at the registered office of the SICAV Representative in Switzerland or at the registered office or domicile of the investor. Additional information for investors in Italy: In Italy the documentation listed above relating to the SICAV is available at distributors and on the website www.basesicav.lu/documents. The updated list of the distributors and the respective Paying Agents is made available to the public at the same distributors, at the respective Paying Agents (Banca Sella Holding S.p.A, Allfunds Bank S.A.U) and on the aforementioned website. A summary of investor rights is available here www.basesicav.lu/documenti/altro in the local language of the jurisdictions where the individual share class is registered for marketing.

The Sicav or the Management Company may decide to terminate the arrangements made for the marketing of its collective investment undertaking in one Member State in accordance with Article 93a of Directive 2009/65/EC and Article 32a of Directive 2011/61/EU.

Past performances are not indicative of future results. Performance figures do not take into account any share issue or redemption fees or charges. Past results are shown in the share class reference currency. Yields are shown before tax charges. Investors are reminded that future returns are subject to taxation, which depends on their personal situation and may change in the future.
