

Base Investments Sicav - Flexible Low Risk Exposure EUR

Monthly Factsheet - May 2025

Marketing Document for retail investors in: LU, CH, IT

Fund Data

Strategy	Flexible
Fund size	€230mln
Portfolio Manager	Giorgio Bertoli
Domicile, Legal Structure	Luxembourg, UCITS
Delegated Investment Manager	Banca del Sempione SA
Custodian Bank	Edmond De Rothschild (Europe)
Administrator/Management Company	Edmond De Rothschild Asset Management (Lux)
Auditor	Pricewaterhouse Coopers Sarl
Management Fee	1.50%
Performance Fee	15% of the performance of NAV against the HWM

Class	Type	ISIN
EUR	Retail	LU0492099089

Objective

The aim of the Flexible Low Risk Exposure sub-fund is to generate positive real returns for the investor, whilst maintaining particular attention to the preservation of capital.

Strategy

The active asset allocation process is implemented through a flexible approach on different asset class, mainly government and corporate bonds, equity and Forex. The maximum exposure to high risk securities such as equities and high yield bonds is limited singularly to 15% of total assets.

Global Strategy	High Flexibility	Relative Value	Asymmetries search
Seeking opportunities through a top-down approach in the main geographical regions.	Asset allocations independent from the benchmark. Low correlation with the main risk contributors (rates, equity markets).	Spread between currencies, fixed income curves, equity markets used to generate value on non-directional markets.	The corporate market illiquidity may occasionally generate investment opportunities.

Performance Summary

The sub-fund is actively managed without reference to any benchmark (index). The benchmark in this graph is shown here for comparative purposes only and is not used for the calculation of the performance fee.

Monthly summary

The month of May saw a continuous improvement in the global geopolitical landscape with the closing of the first trade agreements of the Trump administration, in particular with the UK. Also noteworthy was the meeting between the US and Chinese delegations in Geneva, in which the two countries would have found a basic agreement to discuss new trade pacts, sanctioning the reduction of reciprocal duties from 145% for the Americans and 125% for the Chinese to 30% and 10% respectively and laying the foundations for further discussions. On this more relaxed rhetoric, the stock indices continued to rebound, also supported by good quarterly results. The only thing to note was an increase in volatility on the occasion of Trump's threats to impose 50% tariffs on Europe, threats that were immediately withdrawn by the US president. This latest U-turn gave rise to a new acronym TACO (Trump Always Chickens Out) coined by the FT to signal the rapid rethinking following the president's statements.

As for the bond market, government bond yields remained under pressure, especially those with longer maturities such as 30 years and with the US 30-year bond exceeding the 5% threshold. Weighing on the cost of American debt was the new "Big Beautiful Bill Act" just passed by Congress and which foresees a further increase in the deficit at a time when American assets (bonds and currency) are already suffering due to lack of demand. Furthermore, in the month, the downgrade by Moody's and a more wait-and-see FED than expected further weighed down sentiment and led the US Treasury yield to close the month at 4.40%. The European panorama was less turbulent with the bund closing at the levels of the beginning of the month.

On the equity side, however, the price action was more solid with the S&P recording its best May since 1990, supported by the easing of duties and a quarterly earnings season that was above expectations. Finally, the Nvidia report also confirmed that investments in AI and data centers continue, bringing further positivity.

In the end, on the currency side, the weakness of the greenback against the main global currencies continues with the EUR/USD reaching 1,135, gold and WTI relatively little moved with the yellow metal stable at 3,300 USD per ounce and oil closing at 60.80 USD.

Top performance contributors

- Short usd
- Credit

Top performance detractors

- Inflation-linked bond
- US and UK bonds long-end

Positioning and market view

Rates: duration in area 6.5. The resilience of global economies, and the potential approval of a new expansionary fiscal package in the US, are challenging our idea of rates tending to be bearish. However, we believe that valuations already incorporate these concerns, and that further upward movements in yields could put pressure on policymakers that may prove temporary. We therefore confirm the long duration approach, with positions concentrated on 5y US, 30y inflation-linked bonds, and long-term corporate IG.

Credit: Spreads remain at fairly high levels, so we keep a not too aggressive exposure, with a high share of government bonds and cash. We see residual value in some emerging market themes.

Equity: zero structural exposure, high volatility allows for implementing some tactical operations both long and short with small size.

Fx: structural exposure short dollar confirmed. We added a small basket of emerging currencies (Brl, Cop, Czk, Kzt, Try) for a total of 2%, to which we add 1.5% of Mxn.

Monthly Factsheet - May 2025

Risk Indicator

The summary risk indicator assumes you keep the Product until maturity end of the recommended holding period (5 years). The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this Product compared to other products. It shows how likely it is that the Product will lose money because of movements in the markets or because we are not able to pay you. This Product is rated in the category above mentioned, in line with the type of securities and geographic regions detailed under the heading "Objectives and investment policy". The capital is not guaranteed.

The following risks may be materially relevant but may not always be adequately captured by the synthetic risk indicator and may cause additional loss:

Credit Risk: the Product may invest in debt securities which are exposed to the risk that the borrower will be unable to meet its repayment obligations.

Counterparty Risk: the Product may suffer losses if a counterparty to a financial instrument defaults and fails to meet its payment obligations to the Product.

Emerging and Frontiers Markets Risk: increased political or social instability, economies based on only a few industries, unstable currencies, runaway inflation, highly volatile securities markets, unpredictable shifts in policies relating to foreign investments, lack of protection for investors may affect the investments of the Product.

Market Risk: the Product may experience losses from fluctuations in securities prices in portfolio.

Liquidity Risk: when investments are made in financial instruments that could have a lower level of liquidity in some circumstances for example in the case of a market crash or default of issuers and/or due to massive redemptions of shareholders resulting in a potential decrease of the value of certain of the Product's investments.

Interest Rate Risk: interest rate risk is the possibility that the value of the assets of the Product will decline as the result of an unexpected change in interest rates, especially but not limited, for investments in bonds.

Currency Risk: the Product invests in assets priced in foreign currencies which may be adversely affected by changes in exchange rates in relation to the reference currency of the Product and of the share classes denominated in a currency other than the reference currency.

Operational Risk: this is the risk that failures, problems and/or inadequacies of systems, processes and/or people (in particular by the investment manager) may cause losses to the Product.

Risk linked to the use of derivative instruments: a careful use of derivatives can be beneficial to the Product but implies additional risks different from traditional assets such as the risk of divergent valuation depending on the application of different pricing methodologies. The use of derivatives can result in greater fluctuations of the Product assets and may cause the Product to lose as much as or more than the amount invested. Due to the use of derivatives, the Product may have an increased exposure to particular investment known as leverage. A fall in value of such investments can result in a proportionately greater loss to the Product.

Volatility-Leverage: In order to efficiently implement the Sub-Fund's strategy and to achieve the risk target that is consistent with the Sub-Fund's risk profile, the Sub-Fund will rely intensively on financial derivative instruments and underlyings that may generate a high level of leverage and the Sub-Fund may experience higher volatility than a fixed income fund that does not use leverage.

The list of possible risks is not exhaustive; full risk information is available in the Sale Prospectus, chapter 5 "Special consideration on risks".

Glossary

Share class sub-fund of a fund differentiated in terms of client type, fee structure, currency, minimum investment or other characteristics. The characteristics of each share class are described in the offering prospectus. **Management fee** is a fee that covers all costs charged to a fund in relation to portfolio management services and, if applicable, distribution services. **Incentive fee (performance)** is a fee withheld by the management company based exclusively on the results achieved by the fund and is calculated if the fund performs better than a reference index, the benchmark, or if it records a gain in absolute terms. **Duration** indicates the number of years an investor should keep a position in the bond until the present value of the bond's cash flows to equal the amount paid for that bond. Longer is the duration, more the price of a bond will be influenced by changes in interest rates. Duration can also be used to compare the risk of debt securities with maturities and yields. **High Water Mark (HWM)** is the highest value achieved by a fund and it is used as a threshold to measure a manager's performance. In the case of this fund, according to the HWM principle, no performance fee will be charged if the NAV, before considering the fee, is lower than the latest reference NAV. Any losses accumulated in the past can be written off after a period of five years. The performance fee is assessed at the end of each calendar year, following a calculation method described in the prospectus. **Index** is a portfolio that holds a broad range of securities according to predefined rules. Some indices are used to represent the performance of particular markets and therefore serve as a point of reference for measuring the performance of other portfolios. An index used as a reference for performance comparison is called a "benchmark index". **ISIN** (International Securities Identification Number) unique code that identifies a specific financial security. It is assigned by the respective national coding agency of a country. **Bonds** are debt (for the entity that issues them) and credit securities (for the entity that purchases them) that represent a portion of debt taken out by a company or public body for financing. They guarantee the buyer the reimbursement of the capital (at the end of the pre-established period) plus interest (the remuneration that is due to those who purchase bonds in exchange for the sum invested). **High Yield Bonds** are a type of corporate bond that offers a higher interest rate due to its greater risk of default. Credit rating evaluates the ability of a bond issuer to repay all its debt obligations (interest and principal) on time. High ratings, such as AAA or Aaa, indicate low risk (i.e. a low probability of default), while ratings such as BBB- or Baa3 indicate greater risk. **Yield to maturity (YTM)** indicates the fund's return if all the bonds in the portfolio were to be held until the maturity date. The ratio is expressed as a percentage annual return. **Volatility**, the fluctuation of a fund's performance over a given period, provides an analysis of the amount of risk and uncertainty in a security or portfolio. Typically, higher is the volatility, riskier is the securities or portfolio.
