Custodian Bank	Edmond De Rothschild (Europe)
Administrator/ Management Company	Edmond De Rothschild Asset Management (Lux)
Auditor	Pricewaterhouse Coopers Sarl
Management Fee	1.00%
Performance Fee	20% of the difference between the NAV performance and the performance of the reference index

Class	Type	ISIN
EUR	Retail	LU1590086069

Objective

Multi-asset, multi-manager balanced fund whose objective is a real growth in capital in the medium to long term, by controlling the drawdown.

Strategy

The fund is managed through the use of directional and absolute return strategies, across equity, fixed income and for a residual portion commodities.

Investment strategy based on 5 pillars:

Performance	Fund	Index
Cumulative performance	-4.84%	18.98%
Annualized performance	-0.27%	4.47%
Standard Deviation	8.79%	7.05%
Sharpe Ratio	-0.03	0.63
% positive months	56%	66%
% negative months	44%	34%

Market Performance	Mtd	Ytd
MSCI World	-4.45%	-1.79%
MSCI Emerging	0.63%	2.93%
S&P500	-5.67%	-4.37%
Stoxx600	-3.84%	5.77%
Barclays Global Agg.	-0.53%	0.80%

Reference Indexes	Value	Monthly Var.
Vix	22.28	2.65
ESTRON	2.42	-0.24
TSFR1M usd	4.32	-0.01
Bund 10y Yield	2.74	0.33
US Treasury 10y Yield	4.21	-0.00

Performance Summary

The benchmark until 31.12.2019 was consisting of 60% Bloomberg Barclays Global Aggregate and 40% MSCI WORLD; as from 01.01.2020 the benchmark was modified in 34% Bloomberg Barclays Global Aggregate, 33% MSCI WORLD TR Net and 33% Euro short term rate ESTR index.

Class	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	YTD

Monthly Factsheet - March 2025

Strategy for the portfolio

The five pillars of the strategy can be summarized into a pyramid-shaped approach. Every investment instrument must fall in one of the buckets.

Source: Banca del Sempione SA

Monthly summary

The month of March intensified the volatility expressed by the markets, mainly influenced by macroeconomic changes and developments in the geopolitical context. First, the effect of tariffs pressures global growth projections: the optimism expressed by PMIs before Trump's inauguration has turned against him, with a growing fear of trade wars could impact the whole global economy, as much as to increase the probability of recession based on economists' sentiment. The choice to abandon the notorious "nuclear umbrella" by the newly elected president, on the other hand, has forced Europe to review spending plans in the defense sector, an aspect that pushed Germany, with the new coalition led by Merz in government, to abandon solid fiscal discipline to launch a spending package of over 500 billion euros.

The reaction of government yield curves was therefore distinct: in Europe, the easing of German budget discipline led to a historic increase in yields, of over 30 basis points in a single session, which exceeds the records reached after the fall of the Berlin Wall, and the movement also influenced the rest of Europe. Greater stability was achieved from US Treasuries, returning to 4.2% after having risen to 4.4% on inflation fears. Credit spread widened slightly following the projections shift, especially among US issues.

The stock market, on the other hand, recorded substantial declines, with the S&P500 down to -5.5%, the Nasdaq at -7.5%, and Europe at -4%. The German spending plan had supported the tactical positioning on Europe by market operators at the beginning of the month, partially attenuated by the fear of more substantial duties by Trump, and without a positive outcome from the negotiations to end the war between Russia and Ukraine. On the other hand, the Hang Seng index (+1.1%) was positive, benefiting from the renewed appeal of Chinese technology after Deepseek, as well as from government support for consumption and 5% GDP growth.

Despite the continued weakening of the dollar, with the EUR/USD ratio going from 1.06 to 1.08, commodities did not benefit particularly from this tailwind, with oil remaining stable and gold rising thanks to strong inflows from investors and trading venues.

Top Performers

- China equity
- Gold

Worst Performers

- Thematic equity
- Global equity

Positioning and market view

In March, the sub-fund had a performance of -1.28%, outperforming the benchmark which closed -1.58%. March saw an intensification of the trade war unleashed by Trump and fears relating to American growth, fears also confirmed by worsening macroeconomic data which led to further volatility in the stock market, particularly in higher beta sectors.

For the fund's positions, it is worth highlighting the excellent performance of China, which continues to benefit from the ongoing global rotation, and that of gold, which has reached new all-time highs. Negative performances, on the other hand, from global equity exposure and thematic ones, which are more exposed to US securities.

Several adjustments were made during the month; positions with greater credit risk were limited and there was a slight profit taking on gold in favor of a liquidity component, the position in US small caps was closed in favor of the inclusion of an equity fund on Asia, and finally the position on a systematic fund was closed in favor of greater diversification of strategies, with the inclusion of an M&A arbitrage fund and an active one on volatility. The composition of the fund is currently: 35.8% bonds, 34.3% equities, 23.5% alternative funds with the remaining part in gold and liquidity.

Risk Indicator

Risk Profile

The summary risk indicator assumes you keep the Product until maturity end of the recommended holding period (5 years). The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this Product compared to other products. It shows how likely it is that the Product will lose money because of movements in the markets or

because we are not able to pay you. This Product is rated in the category above mentioned, in line with the type of securities and geographic regions detailed under the heading "Objectives and investment policy". The capital is not guaranteed.

The following risks may be materially relevant but may not always be adequately captured by the synthetic risk indicator and may cause additional loss:

Credit Risk: the Product may invest in debt securities which are exposed to the risk that the borrower will be unable to meet its repayment obligations.

Interest Rate Risk: interest rate risk is the possibility that the value of the assets of the Product will decline as the result of an unexpected change in interest rates, especially but not limited, for investments in bonds.

Risk linked to the use of derivative: Due to the use of derivatives, the Product may have increased exposure to particular investment known as leverage. A fall in value of such investments can result in a proportionately greater loss to the Product. A careful use of derivatives can be beneficial to the Product but implies additional risks different from traditional assets such as the risk of divergent valuation depending on the application of different pricing methodologies. The use of derivatives can result in greater fluctuations of the Product assets and may cause the Product to lose as much as or more than the amount invested.

Liquidity Risk: which may occur: when investments are made in financial instruments that could have a lower level of liquidity in some circumstances for example in the case of a market crash or default of issuers and/or due to massive redemptions of shareholders resulting in a potential decrease of the value of certain of the Product's investments.

Custody Risk: the Product invests in assets priced in foreign currencies which may be adversely affected by changes in exchange rates in relation to the currency.

Market Risk: the Product may experience losses from fluctuations in securities prices in portfolio.

Counterparty Risk: the Product may suffer losses if a counterparty to a financial instrument defaults and fails to meet its payment obligations to the Product.

Operational Risk: this is the risk that failures, problems and/or inadequacies of systems, processes and/or people (in particular by the investment manager) may cause losses to the Product.

The list of possible risks is not exhaustive; full risk information is available in the Sale Prospectus, chapter 5 "Special consideration on risks".

Glossary

Share class sub-fund of a fund differentiated in terms of client type, fee structure, currency, minimum investment or other characteristics. The characteristics of each share class are described in the offering prospectus. **Management fee** is a fee that covers all costs charged to a fund in relation to portfolio management services and, if applicable, distribution services. **Incentive fee (performance)** is a fee withheld by the management company based exclusively on the results achieved by the fund and is calculated if the fund performs better than a reference index, the benchmark, or if it records a gain in absolute terms. **Duration** indicates the number of years an investor should keep a position in the bond until the present value of the bond's cash flows to equal the amount paid for that bond. Longer is the duration, more the price of a bond will be influenced by changes in interest rates. Duration can also be used to compare the risk of debt securities with maturities and yields. **High Water Mark (HWM)** is the highest value achieved by a fund and it is used as a threshold to measure a manager's performance. In the case of this fund, according to the HWM principle, no performance fee will be charged if the NAV, before considering the fee, is lower than the latest reference NAV. Any losses accumulated in the past can be written off after a period of five years. The performance fee is assessed at the end of each calendar year, following a calculation method described in the prospectus. **Index** is a portfolio that holds a broad range of securities according to predefined rules. Some indices are used to represent the performance of particular markets and therefore serve as a point of reference for measuring the performance of other portfolios. An index used as a reference for performance comparison is called a "benchmark index". **ISIN** (International Securities Identification Number) unique code that identifies a specific financial security. It is assigned by the respective national coding agency of a country. **Bonds** are debt (for the entity that issues them) and credit securities (for the entity that purchases them) that represent a portion of debt taken out by a company or public body for financing. They guarantee the buyer the reimbursement of the capital (at the end of the pre-established period) plus interest (the remuneration that is due to those who purchase bonds in exchange for the sum invested). **High Yield Bonds** are a type of corporate bond that offers a higher interest rate due to its greater risk of default. Credit rating evaluates the ability of a bond issuer to repay all its debt obligations (interest and principal) on time. High ratings, such as AAA or Aaa, indicate low risk (i.e. a low probability of default), while ratings such as BBB- or Baa3 indicate greater risk. **Yield to maturity (YTM)** indicates the fund's return if all the bonds in the portfolio were to be held until the maturity date. The ratio is expressed as a percentage annual return. **Volatility**, the fluctuation of a fund's performance over a given period, provides an analysis of the amount of risk and uncertainty in a security or portfolio. Typically, higher is the volatility, riskier is the securities or portfolio.
