

Base Investments Sicav - Multi Asset Capital Appreciation EUR

Monthly Factsheet - March 2026

Marketing Document for retail investors in: LU, CH, IT

Fund Data

Strategy	Fund of funds
Fund size	€42mln
Portfolio Manager	Management Team
Domicile, Legal structure	Luxembourg, UCITS
Delegated Investment Manager	Banca del Sempione SA
Custodian Bank/ Administrator	CACEIS Bank, Luxembourg Branch
Management Company	Edmond De Rothschild Asset Management (Lux)
Auditor	Pricewaterhouse Coopers Sarl
Management Fee	1.00%
Performance Fee	20% of the difference between the NAV performance and the performance of the reference index

Class	Type	ISIN
EUR	Retail	LU1590086069

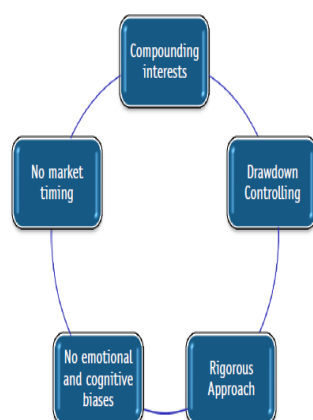

Objective

Multi-asset, multi-manager balanced fund whose objective is a real growth in capital in the medium to long term, by controlling the drawdown.

Strategy

The fund is managed through the use of directional and absolute return strategies, across equity, fixed income and for a residual portion commodities.

Investment strategy based on 5 pillars:

Performance	Fund	Index
Cumulative performance	2.54%	27.51%
Annualized performance	0.66%	4.77%
Standard Deviation	8.48%	6.75%
Sharpe Ratio	0.08	0.71
% positive months	58%	68%
% negative months	42%	32%

Market Performance	Mtd	Ytd
MSCI World	-6.37%	38.57%
MSCI Emerging	-13.06%	43.35%
S&P500	-5.01%	39.74%
Stoxx600	-7.66%	29.01%
Barclays Global Agg.	-1.97%	3.76%

Reference Indexes	Monthly	
	Value	Var.
Vix	25.25	5.39
ESTRON	1.93	-0.00
TSFR1M usd	3.66	-0.00
Bund 10y Yield	3.00	0.36
US Treasury 10y Yield	4.32	0.38

Monthly Factsheet - March 2026

Strategy for the portfolio

The five pillars of the strategy can be summarized into a pyramid-shaped approach. Every investment instrument must fall in one of the buckets.

Source: Banca del Sempione SA

Monthly summary

The month of March was characterized by a marked escalation in global geopolitical tensions. The outbreak of conflict between the United States/Israel and Iran triggered a regional crisis in the Middle East, with a series of retaliations targeting energy infrastructure and significant disruptions to trade routes along the Arabian Peninsula, particularly in the Strait of Hormuz.

Although the macroeconomic framework of developed economies remains, for the time being, generally resilient, the first effects of the conflict have begun to manifest themselves, especially through a rapid acceleration in fuel and gas prices in Europe, Asia and the United States.

The impact was significantly reflected in government bond yields. The resurgence of inflationary pressures prompted major central banks to adopt a more cautious stance, effectively suspending expectations of further rate cuts in the short term, particularly in the case of the Federal Reserve, and refocusing on balancing inflation and growth dynamics. This shift in tone led to a rise in government bond yields of around 35-40 basis points in both the United States and Europe. The movement was amplified in the corporate sector, where credit spreads widened; in particular, the European iTraxx Crossover index rose from 260 to 350 basis points during the month.

Equity markets were also affected by the environment, penalized by rising energy costs. Cyclical sectors experienced the sharpest corrections, with more pronounced impacts on European and Asian indices, which were more exposed to disruptions along the Strait of Hormuz. The Euro Stoxx closed the month down 9%, the MSCI Asia Index -13%, while the S&P 500 showed greater resilience, limiting losses to 5%. At the sector level, the technology sector showed better relative resilience, benefiting from a rotation from more cyclical and value segments towards sectors less sensitive to the energy cycle.

In commodities, oil (WTI) recorded a significant increase, rising from \$65 to \$100 per barrel, while European natural gas (TTF) rose from 30 to 50 EUR/MWh. Gold failed to play its traditional safe-haven role, recording a decrease of 12% over the month.

Top Performers

- Derivative hedging
- L/S bond, credit arbitrage

Worst Performers

- Global Equity
- Europe Equity

Positioning and market view

In March, the fund had a performance of -3.9%, underperforming the benchmark by -1.2%. This underperformance was driven by an equity composition focused more on European and emerging markets, which detracted more than the benchmark's US allocations,

complicated by higher credit exposure and minimal directional influence from the alternatives component. On the other hand, the positive contribution of hedging structures supported performance, while some lagging NAVs will support subsequent fund readings given the markets' recovery at the end of the month.

The opportunity was taken to round out some exposures with the cash accumulated during the month at the equity level (benchmark), while an alternative long/short product was replaced to optimize the fund's costs.

The fund's positioning is: 33.2% bonds, 33.7% equities, 28.2% alternative funds, with the remainder in gold (2.1%) and cash.

Monthly Factsheet - March 2026

Risk Indicator

The summary risk indicator assumes you keep the Product until maturity end of the recommended holding period (5 years). The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this Product compared to other products. It shows how likely it is that the Product will lose money because of movements in the markets or

because we are not able to pay you. This Product is rated in the category above mentioned, in line with the type of securities and geographic regions detailed under the heading "Objectives and investment policy". The capital is not guaranteed.

The following risks may be materially relevant but may not always be adequately captured by the synthetic risk indicator and may cause additional loss:

Credit Risk: the Product may invest in debt securities which are exposed to the risk that the borrower will be unable to meet its repayment obligations.

Interest Rate Risk: interest rate risk is the possibility that the value of the assets of the Product will decline as the result of an unexpected change in interest rates, especially but not limited, for investments in bonds.

Risk linked to the use of derivative: Due to the use of derivatives, the Product may have increased exposure to particular investment known as leverage. A fall in value of such investments can result in a proportionately greater loss to the Product. A careful use of derivatives can be beneficial to the Product but implies additional risks different from traditional assets such as the risk of divergent valuation depending on the application of different pricing methodologies. The use of derivatives can result in greater fluctuations of the Product assets and may cause the Product to lose as much as or more than the amount invested.

Liquidity Risk: which may occur: when investments are made in financial instruments that could have a lower level of liquidity in some circumstances for example in the case of a market crash or default of issuers and/or due to massive redemptions of shareholders resulting in a potential decrease of the value of certain of the Product's investments.

Custody Risk: the Product invests in assets priced in foreign currencies which may be adversely affected by changes in exchange rates in relation to the currency.

Market Risk: the Product may experience losses from fluctuations in securities prices in portfolio.

Counterparty Risk: the Product may suffer losses if a counterparty to a financial instrument defaults and fails to meet its payment obligations to the Product.

Operational Risk: this is the risk that failures, problems and/or inadequacies of systems, processes and/or people (in particular by the investment manager) may cause losses to the Product.

The list of possible risks is not exhaustive; full risk information is available in the Sale Prospectus, chapter 5 "Special consideration on risks".

Glossary

Share class sub-fund of a fund differentiated in terms of client type, fee structure, currency, minimum investment or other characteristics. The characteristics of each share class are described in the offering prospectus. **Management fee** is a fee that covers all costs charged to a fund in relation to portfolio management services and, if applicable, distribution services. **Incentive fee (performance)** is a fee withheld by the management company based exclusively on the results achieved by the fund and is calculated if the fund performs better than a reference index, the benchmark, or if it records a gain in absolute terms. **Duration** indicates the number of years an investor should keep a position in the bond until the present value of the bond's cash flows to equal the amount paid for that bond. Longer is the duration, more the price of a bond will be influenced by changes in interest rates. Duration can also be used to compare the risk of debt securities with maturities and yields. **High Water Mark (HWM)** is the highest value achieved by a fund and it is used as a threshold to measure a manager's performance. In the case of this fund, according to the HWM principle, no performance fee will be charged if the NAV, before considering the fee, is lower than the latest reference NAV. Any losses accumulated in the past can be written off after a period of five years. The performance fee is assessed at the end of each calendar year, following a calculation method described in the prospectus. **Index** is a portfolio that holds a broad range of securities according to predefined rules. Some indices are used to represent the performance of particular markets and therefore serve as a point of reference for measuring the performance of other portfolios. An index used as a reference for performance comparison is called a "benchmark index". **ISIN** (International Securities Identification Number) unique code that identifies a specific financial security. It is assigned by the respective national coding agency of a country. **Bonds** are debt (for the entity that issues them) and credit securities (for the entity that purchases them) that represent a portion of debt taken out by a company or public body for financing. They guarantee the buyer the reimbursement of the capital (at the end of the pre-established period) plus interest (the remuneration that is due to those who purchase bonds in exchange for the sum invested). **High Yield Bonds** are a type of corporate bond that offers a higher interest rate due to its greater risk of default. Credit rating evaluates the ability of a bond issuer to repay all its debt obligations (interest and principal) on time. High ratings, such as AAA or Aaa, indicate low risk (i.e. a low probability of default), while ratings such as BBB- or Baa3 indicate greater risk. **Yield to maturity (YTM)** indicates the fund's return if all the bonds in the portfolio were to be held until the maturity date. The ratio is expressed as a percentage annual return. **Volatility**, the fluctuation of a fund's performance over a given period, provides an analysis of the amount of risk and uncertainty in a security or portfolio. Typically, higher is the volatility, riskier is the securities or portfolio.
